HAUTE COUTURE CARBON

BY SEBASTIAAN VANDEPUTTE

ARTELIER C

HAUTE COUTURE LIGHT ORNAMENTS

ARTELIER C

HAUTE COUTURE LIGHT ORNAMENTS

In the beginning there was Artelier C.
And then came the Big Bang.

ARTELIER C, an initiative of Belgian lighting specialist Claeys Verlichting, is a unique concept globally, offering a platform for talented artists seeking to turn their hand to decorative lighting.

Artelier C is not primarily for designers who produce graphic designs and concepts, but for born artists who put their heart and soul into creating unique, hand-made lighting fixtures in all possible shapes, sizes and materials.

Artelier C provides the ideal environment for these creatives, giving them the freedom to focus on their craft. The platform offers access to information, logistics support and project management assistance, as well as a worldwide administrative, financial and sales structure.

With his intergalactic universe, Belgian artist SEBASTIAAN VANDEPUTTE is the Big Bang pioneer of the Artelier C platform.

Artelier C is for enlightened artists who like to push boundaries. It's the Big Bang in the ***beau monde*** of architecture and design. And it's also for royalty, according to CEO Tom Claeys, who has more than thirty years' experience in exclusive lighting.

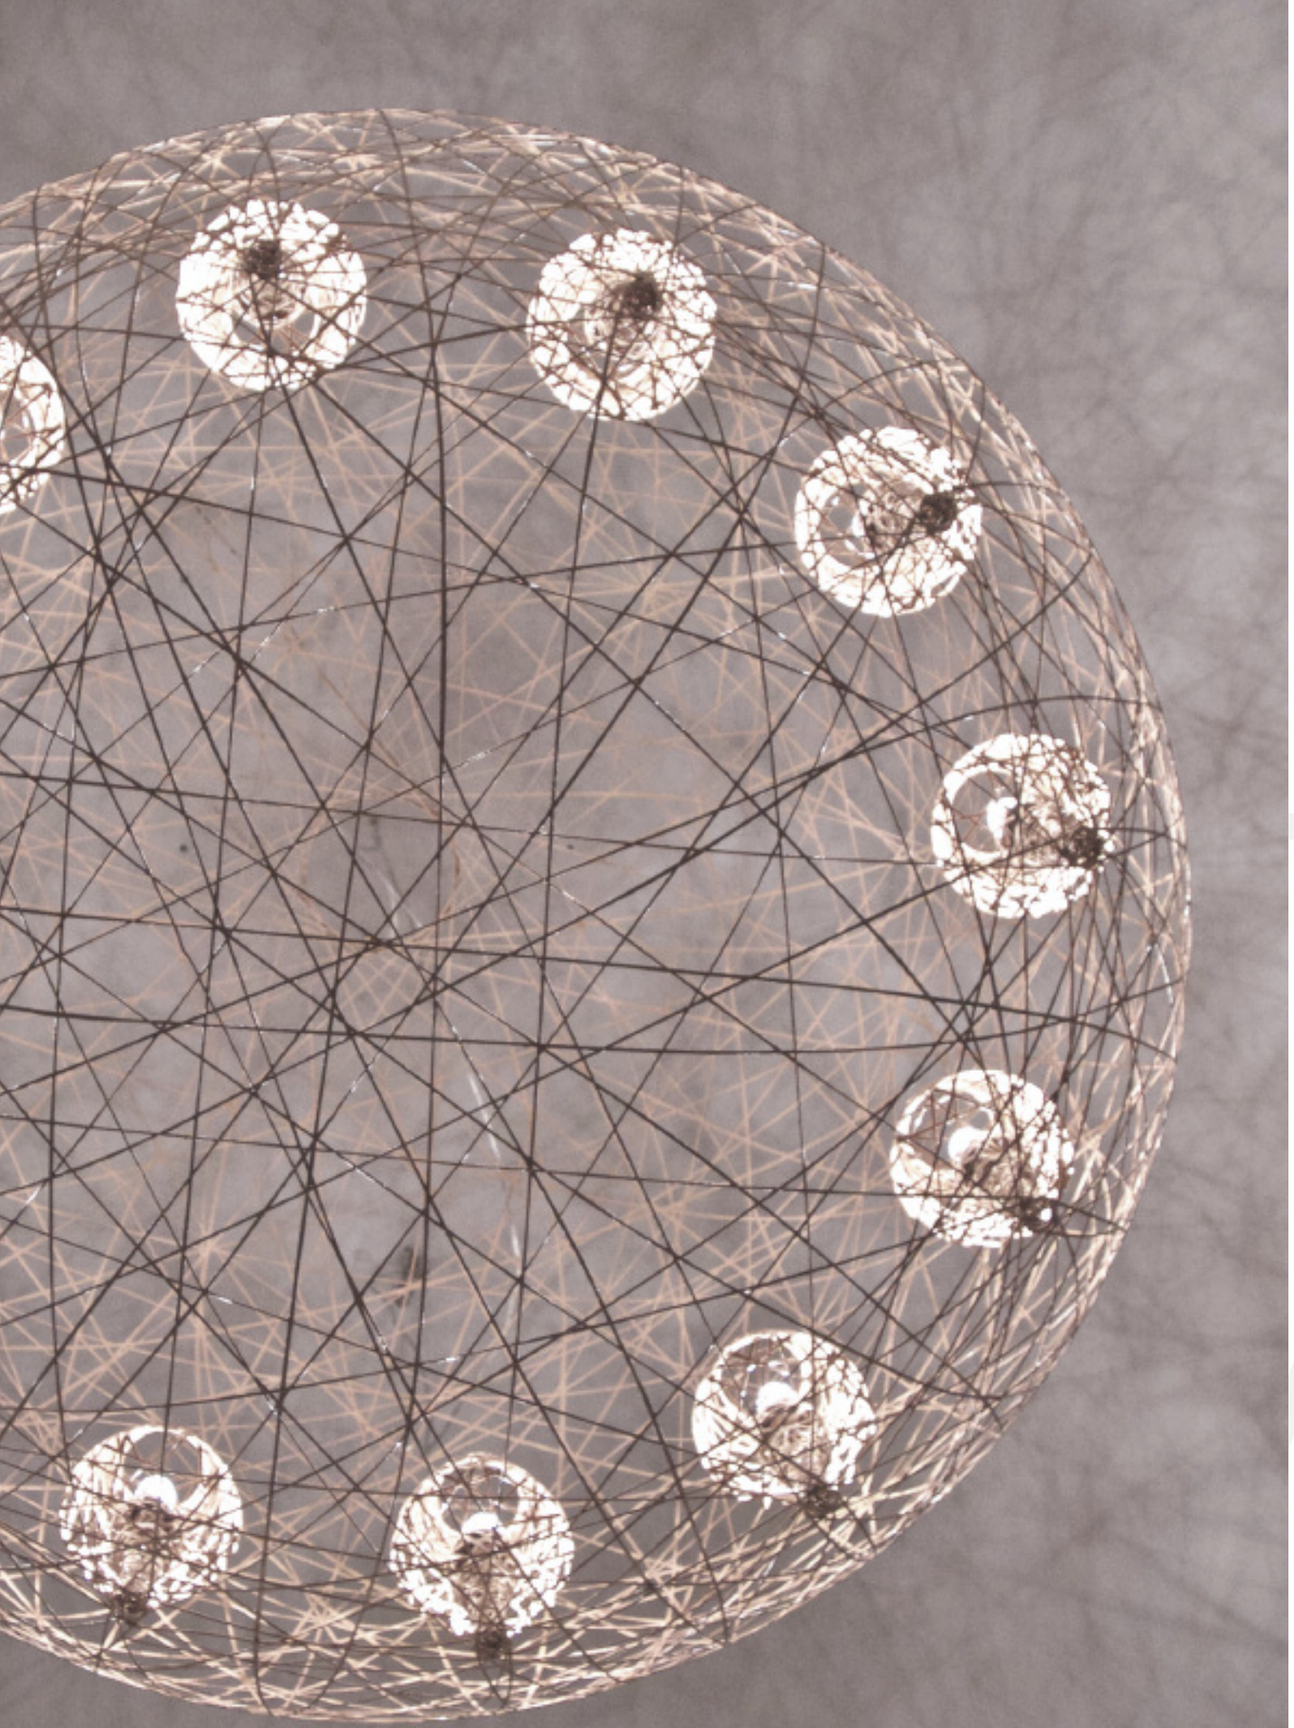

Welcome!

ARTELIER C

A BIG BANG

'The chemical element carbon was at the origin of our planetary system. Just as carbon fibre now lies at the heart of our work at the interface between light and art.'

Sebastiaan Vandeputte

A Big Bang

*'The chemical element carbon was at the origin of our planetary system.
Just as carbon fibre now lies at the heart of our work at the interface
between light and art.'*

Sebastiaan Vandeputte

In the international world of lighting, Artelier C is a platform for an artist
who weaves pure magic using carbon fibre as his 'wand'.

We focus on royalty, says Tom.
On the *beau monde* of architecture and design. On you.

Tom has been creating chic, exclusive lighting for the past 30 years.
For him, Sebastiaan Vandeputte – Seba – is an artist who really pushes boundaries.

Seba devised a technique for working carbon fibre manually.
And went on to create ***Apus, Cetus, Indus, Vela…*** the haute couture of lighting.
Because it was written in the stars.

A Big Bang.

A MATCH

TOM CLAEYS - 1965
With Claeys Verlichting, he has been world-renowned for exclusive, timeless designs for thirty years.

Sebastiaan used to live right around the corner from me when we were kids. Years later, in 2013, we met up again at a lifestyle show in Knokke-Heist, where I first came across Seba's carbon-fibre chairs. And noticed how every visitor to the stand would pick up one of those featherweight gems with a look of sheer amazement and admiration on their face.

And that was when I realised that my years of searching were finally over: the boy next door I grew up with was the guy I'd been looking for all along. A designer who could create unique chandeliers for my lighting universe. Seba, if you can make chairs like that, then you can also design decorative lighting in carbon fibre…

We brainstormed about light, light values and lighting compositions for hours on end. I outlined what I wanted from Seba and then gave him a completely free hand to think, create and work. He would spend hours in his studio and it was just fascinating to watch him grappling with massive spheres of carbon fibre.

But the end result was a magnificent collection of about thirty hand-made lamps and chandeliers crafted in carbon fibre. That would become our prêt à porter collection.

Then things started moving very quickly. The pieces we selected for the World Expo in Milan in 2015 marked a turning point: we blew away the entire architectural community with our decorative lighting made of carbon fibre. But we knew we could do even better. That guy certainly makes you dream.

Seba's next challenge was to design the world's largest chandelier for a luxury shopping mall in a huge building in Antwerp. Guinness Book of Records: check! On the back of that, we won commissions to design chandeliers for ten carefully selected architectural projects scattered around the globe, ranging from an enormous staircase to an Oriental pavilion. The possibilities seemed endless for us.

And now we're bringing our story to you:
the biggest, most exclusive, most unique chandelier sculptures in the world.
Thanks to the combined efforts of two boyhood pals.

MADE IN HEAVEN

SEBASTIAAN VANDEPUTTE - 1977
Artist, technician and designer "Art-Technician"

My first creation was a suspended bath in polyester, followed by a collection of designer furniture in a composite material. **Then I discovered carbon fibre**, and that called for a total rethink: high-tech had to go artisan.

I spent the next two years on a quest, researching and constantly experimenting with various technological processes and different types of carbon fibre. It was pure trial and error.

I travelled all over the globe, from Italy to Japan, looking for the world's top carbon-fibre manufacturers. Getting hold of the quantities I needed as an artist wasn't a problem, but tracking down the specific product I wanted was tougher than I expected. It turned out the kind of carbon fibre I was after was used exclusively in the space industry – and kept firmly under wraps in Europe! But the manufacturer really bought into my dreams and ideas and I managed to import my precious carbon fibre to Belgium, despite the Japanese government's draconian regulations.

The result was a range of furniture, chairs and tables that received international acclaim in the interior design world.

And then a face from the past turned up. Tom had been exhibiting his decorative lighting at the world's most prestigious shows for years and already had many big-name clients. He too was constantly seeking unique beauty and set me a challenge: to create for him the ultimate chandelier in carbon fibre.

So the search was on again, and it would be another long and intensive quest. But my prêt à porter collection was eventually a resounding success. My wall and floor lighting, free-standing lamps and chandeliers took pride of place alongside Tom's prestigious collections in crystal, glass, porcelain and wood.

A match made in heaven. He creates business; I connect ideas in decoration and design…

And I keep dreaming and exploring the boundaries. A chandelier that goes right through glass, 30 by 20 metres in size… The only limit is your own imagination. Try me.

APUS, CETUS, INDUS, VELA...

Carbon is the raw material that lies at the origin of our lighting universe. No other chemical element forms so many compounds – almost ten million. The best known are diamond, graphite and amorphous carbon. After years of research, Seba was the first person to transform carbon fibre into an artisan product using an industrial process.

PRÊT-À-PORTER - Exclusiveness with soul

Our PRÊT-À-PORTER collection creates poetic, atmospheric lighting effects in your home. Our philosophy of embracing traditional values produces a distinctive baroque design language.

The collection is 'woven' by hand, each item different and unique. Perfect harmony is achieved between the lightweight material and the envisaged silhouette, suggested by a few simple lines. A single fibre has a tensile strength of 1,500 kilograms, which means that the sculptured creations are incredibly strong yet light as a feather.

And the fact that the power supply is virtually invisible makes the whole design even more exclusive.

SUR MESURE - Exclusiveness that knows no bounds

The SUR MESURE collection is aimed at connoisseurs of design who want to be light years ahead. Our only limit is our imagination. And we're not afraid to give it free rein.

Our brand of *haute couture* is a wholly unique interpretation of the classic chandelier, free from space limitations and seamlessly blending into the architectural context. Our lighting is designed to fit perfectly into the designated space within a building and is symmetrically and asymmetrically fashioned into one huge, suspended, geometric ensemble.

The effect is out of this world.

Which is why we named our products after constellations as unique as our lighting sculptures.

KING OF THE ELEMENTS

TECHNICAL INFO

An exclusive and sensational material and production process

Carbon, one of the few chemical elements known since antiquity, is non-metallic, extremely expensive and has a unique diversity of organic compounds, earning it the moniker 'King of the Elements'. The isotope carbon-14 has a half-life of 5,730 years. Carbon fibre is made up of 24,000 fibres (24K) and in pre-cured form can be cut with scissors. It is made by a chemical process called pyrolysis – a well-kept secret that smacks of alchemy – in which, under very high pressure and at a temperature of 3000°C, precursor fibres (e.g. acrylic) are transformed into carbon fibre at almost the molecular level.

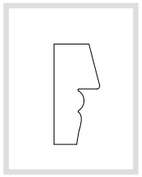

The secret artisan production process requires an ambient temperature of 26°C and involves mixing the carbon fibres with epoxy. They are then applied to a mould by hand and left to harden at 60°C for three days.

The carbon-fibre spheres produced can reach a height of 2 metres, making them extremely physically demanding to work with.

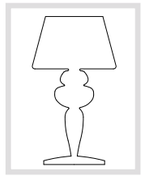

The world of haute couture lighting knows virtually no limits. The items created, which are always conceived as a single element, can range in size up to 20 metres.

One finished sphere may contain up to 400 metres of carbon fibre, while there may be as many as 160 spheres in one chandelier.
